Single mum with app-titude

KOTA KINABALU: A single mother of five from Kuala Lumpur aims to mark her name in the Malaysia Book of Records for making the most climbs (nine) on Mount Kinabalu in a single expedition.

And at the same time launching her mobile applications atop Kinabalu (pic).

Kartina Abdul Ghani, 53, completed her first few climbs starting Oct 15, and has several more to go until Nov. 9, making it a total of nine climbs during the duration.

She hopes to blend endurance, digital transformation and artificial intelligence (AI) to inspire Malaysians and the global audience by showcasing the ease of mobile app development and proper AI usage through her flagship AMB Drag & Drop Mobile Apps Builder Toolkit.

This expedition is also part of Kartina's training towards her ultimate goal - climbing Mount Everest in 2026.

During this Mount Kinabalu expedition, she will publish a brand-new app directly to the Google Play Store and Apple App Store using her low-code/no-code

platform every time she reached the summit.

"My goal is to show how simple it is for users of all skill levels to create mobile apps, even without technical backgrounds," she said, adding she will also use this opportunity to educate the public on AI prompting techniques.

Based on Kartina's research, 97pc of AI users are not leveraging AI tools correctly.

By conducting live demonstrations from the summit, she will showcase how to properly use AI for personal and business growth, creating excitement around the potential of AI technology.

On the Everest expedition, she said her climbs up Kinabalu are just the beginning.

"This expedition marks the start of a rigorous training plan designed to prepare me for Mount Everest in 2026," said Kartina.

She said she would be undergoing altitude training in Poland, as well as training climbs at Mt Muztagata, Mt Lobuche and Mout Manaslu as well as the Everest Base Camp.
